# Forms Should be Easy, Right?

The screenshot shows a web form titled 'Manage Author' on the Pluralsight website. The header includes the Pluralsight logo and navigation links for 'Home', 'Authors', and 'About'. The form has two input fields: 'First Name' and 'Last Name'. Below these fields is a 'Save' button.

pluralsight Home Authors About

## Manage Author

First Name

Last Name

Save

Validation

Redirects

Reusable inputs

User notifications

Saving and population on load

# Controlled Components

Any `<input>` with a value set is a controlled component.

Element's value *always* matches the value of the assigned prop.

## Summary

Input with value = Controlled component

Created reusable inputs

Saved data via API call

Redirected after save

Displaying notifications

Added validation

Used PropTypes to declare expectations

Protect from losing work via Prompt

Read URL to populated form
